TITLE	Academic Characteristics of the 1994-95 Freshman Class: University System of Georgia Normative Data.
INSTITUTION	University System of Georgia, Atlanta.
PUB DATE	Jul 96
NOTE	120p.
AVAILABLE FROM	Board of Regents, University System of Georgia, 244 Washington St. S.W., Atlanta, GA 30334.
PUB TYPE	Statistical Data (110) -- Reports - Research/Technical (143)
EDRS PRICE	MF01/PC05 Plus Postage.
DESCRIPTORS	Academic Achievement; Academic Advising; Academic Standards; *College Admission; College Bound Students; College Entrance Examinations; *College Freshmen; Decision Making; Full Time Students; *Grade Point Average; Higher Education; Part Time Students; Prediction; *State Universities
IDENTIFIERS	Georgia; *Georgia University System; Scholastic Assessment Tests

ABSTRACT

This report provides summary statistics on the entering freshmen classes of the 34 state institutions of higher education in the University System of Georgia, and is intended to assist in advising prospective students concerning their probable success in college. The formulas for predicting average freshmen grades (AFG) are intended primarily for use by admissions officers as aids in identifying and admitting those students most likely to succeed at their institutions. Three groups of students are included: (1) all entering freshmen, i.e., all students new to the institutions with no previous college credit; (2) freshmen attempting at least five hours; and (3) freshmen attempting at least 25 hours. Data are provided for the overall Georgia system and for each of its 33 institutions which enrolled a total of 29,268 freshmen students in 1994-95. The following data are given for each group of freshmen, at each institution: average Scholastic Assessment Test (SAT) scores, correlation between pre-admission indices and first year average grades, entering freshmen SAT verbal and mathematics scores, and high school average grades. THE UNIVERSITY SYSTEM OF GEORGIA

The University System of Georgia encompasses the 34 state institutions of higher education in Georgia. The System is governed by a Board of Regents, which, under the Constitution of the State of Georgia has full authority to manage and control the institutions. Dr. Stephen R. Portch, Chancellor, serves as the chief administrative officer of the System and the chief executive officer of the Board of Regents. The Regents' Central Office is at 244 Washington Street, SW, Atlanta, Georgia 30334.

FOREWORD

This publication describes the academic characteristics of the 1994-95 entering freshmen in the University System of Georgia. It is the thirty-eight of a series of similar publications first printed in 1957. The data are based upon beginning freshmen who entered the University System during Summer 1994, Fall 1994, Winter 1995, and Spring 1995, and are compiled from the Student Information Reporting System (SIRS) Normative Data Base.

The class is described in terms of verbal (V) and mathematics (M) scores on the College Board's Scholastic Assessment Test (SAT), the academic record achieved in high school (HSA), and the academic record achieved in college (AFG).

Equations predicting average freshman grades using SAT-V, SAT-M, and HSA are reported. The correlation coefficients between AFG and each of the predictor variables are also reported. Standard errors of estimate are provided to indicate the amount of variance in AFG not accounted for by the predictive variables.

The publication of the *Normative Data* represents the collaborative efforts of several individuals. Data for this publication were compiled and prepared for analysis by Murray Webb of Academic Administration Systems. The Office of Institutional Research and Planning of The University of Georgia analyzed the normative data to produce this report.

Our special thanks go to T. William Kethley, Jr., Office of Institutional Research and Planning of The University of Georgia, who analyzed the normative data base (using SAS) and through creative programming efforts transformed the results from computer output to the final document without re-entry of data.

If you have comments or questions, please call us (at 404-656-2213). We truly appreciate your suggestions for ways to improve this document.

INTRODUCTION

The primary purpose of this publication is to provide University System institutions with summary statistics about their entering freshman classes and with data useful in advising prospective students concerning their probable success in college. The formulas for predicting Average Freshman Grades (AFG) are intended primarily for use by admissions officers as aids in identifying and admitting those students most likely to succeed at their institutions.

The scales on which basic data are collected or computed are as follows:

High School Average (HSA) and Average Freshman Grade (AFG) are reported on a scale where A = 4.0, B = 3.0, C = 2.0, D = 1.0, and F = 0.0.

College Entrance Examination Board Scholastic Assessment Test verbal and mathematics scores are each reported on a scale ranging from 200 to 800. Composite SAT, the addition of the verbal score and mathematics score, ranges from 400 to 1600. **The 1994-1995 scores are not recentered**.

Definition of the Groups of Students Included

Three groups of students are defined in the normative analysis. ***All Entering Freshmen*** include students new to the institutions who have no previous college credit, including learning support students. ***Freshmen Attempting at Least 5 Hours*** restricts the previous group to include those who attempted at least five quarter-credit hours of regular college level coursework. The descriptive data provided for each institution are based on this group, and it should be emphasized that many learning support students are thus not included in the descriptive tables. ***Freshmen Attempting at Least 25 Hours*** are those freshmen who have attempted 25 hours or more of regular college work. Data from this group of full-time students are used for computing the correlation coefficients and regression equations.

Table 1 presents the population sizes for each of these three groups for each institution in the University System. Each table includes all students for whom data were available on the major variables. The SAT scores of the three groups are compared in Table 2. In this table the average composite SAT score (SAT TOTAL) is shown for each institution, as well as for the System.

The counts in these tables should not be used to determine the size of an institution's "entering class" for the year. The tables do not include students who took the ACT exam, who were admitted into programs that do not require SAT scores, who took the GED, or who for any other reason do not have valid SAT scores or HSA's. Similarly, students who are not retained in the System, and thus do not have data for average freshman grade, are not included in the regression equations. The bias in the equations increases as the attrition rate increases. The number of students who were excluded because of missing data on SAT scores, HSA, or AFG are presented in Table 3.

Average SAT Scores for 1983-84 Through 1994-95

Table 4 shows a comparison of average SAT composite scores for the most recent 12 years. These averages are shown for the University System and each institution.

Correlation Coefficients and Regression Equations

Table 5 shows the separate correlations (Pearson's r) between each of the three individual predictor variables and AFG, as well as the multiple correlation coefficient among AFG and all three predictor variables combined.

Table 6 provides the unstandardized regression coefficients, along with the root mean square errors of estimate for each equation and the R-squared for each equation. R-squared shows the amount of variance explained in average freshman grade by the predictor variables (upper range = 1). The significance of the regression coefficients (at .01 or less) is also reported. If a coefficient appears too large or small compared to previous years, the researcher should check the significance of the *B* coefficients. It is important to note that spurious correlation and regression coefficients can result if the number of students the equation is based on is small. Therefore, institutions with fewer than 100 freshmen attempting 25 credit hours should be cautious about making inferences from the correlation coefficients or regression equations.

How to Use the Regression Equations to Predict AFG

To use the regression coefficients to predict the average freshman grade for a particular student, plug the individual student's scores into the equation. For example, a student with SATV equal to 440, SATM equal to 500, and HSA equal to 2.9 has a predicted average freshman grade of 1.64 at Georgia Institute of Technology. Or, at Columbus College, a

student with scores of SATV equal to 350, SATM equal to 350, and HSA equal to 2.0 has a predicted AFG of 1.69, according to the formula:

$$\widehat{AFG} = -.9728 + 0.0023\,(350) + 0.0015\,(350) + 0.6638\,(2.0) = 1.69$$

In general terms, the regression equation is as follows, where α is the constant:

$$\widehat{AFG} = \alpha + [\,B_1 * SATV\,] + [\,B_2 * SATM\,] + [\,B_3 * HSA\,]$$

Some institutions add other variables to increase the variance explained in AFG.

Normative Distributions

The remaining pages of this publication present distributions of SAT scores and grades. Each distribution shows the number of students who scored in each interval and the cumulative percentage of students below the upper limit of each score interval. SAT, HSA, and AFG distributions are presented for males, females, and total.

The first set of tables in this section presents normative data for all University System freshmen, and the remaining pages report data for each of the University System institutions. In these tables the symbol "%" denotes cumulative percentage.

Three tables of data are reported for the University System and for each institution. The first of these tables contains distributions of SAT scores of *Freshmen Attempting at Least Five Hours*. The second table contains distributions of high school averages (HSA) for *Freshmen Attempting at Least Five Hours*. The third table contains distributions of Average Freshman Grades (AFG) for those students who attempted 25 or more credit hours.

At the bottom of each of these tables appears a sub-table for *Entering Freshman*, reporting the number of entering freshmen, mean scores, and standard deviations. A second sub-table reports the number of *Entering Freshmen Attempting 5 Hours*, their mean scores, standard deviations, and correlations of SAT and HSA with AFG. A third sub-table reports the number of *Entering Freshmen Attempting 25 Hours*, their mean scores, standard deviations, and correlations of SAT and HSA with AFG.

NOTES

- Since Medical College of Georgia had only four freshmen in 1994-95, their data are not included. Interpretations based on such small numbers are not meaningful, and and the confidentiality of the students' scores could not be protected.

- Historical data for DeKalb College are presented for the years since 1986-87.
